

SRP-77

- ▣ process meter with 2 displays
- ▣ input 0/4-20 mA, 0/1-5V, 0/2-10V
- ▣ 0, 1 or 2 relay outputs (or OC type)
- ▣ power supply output: 24V DC
- ▣ RS-485 / Modbus RTU

The main advantages of regulator **SRP-77** are two rows of display. The first one presents measuring value, second one - programmed values: max. and min. 1 or 2 relay (or OC) outputs make it possible to control processes ON/OFF type. Current input has protection safeguarding of the measuring resistor against damage. The device is dedicated to applications, where there is necessity of continuous control of the threshold values. The RS-485 enables data transmission in production process monitoring systems.

- programmable measuring range,
- programmable hystereses and delays of control outputs,
- password protected,
- programmable indication filtration,
- overload-protected current input,
- versions available with AC and DC power supply.

Typical applications

1. Measuring of pressure in a chamber with operating of the compressor according to set parameters and operating of relief valve, easy control of a threshold value.

Accessories

STD-77
 Transparent door with moulded frame acc. to DIN 43700, lockable with security key.

Door and frame are made by injection moulding thus assuring an exact fit, an optimal choice of a material which is very strong and with no risk of corrosion; perfect seal-protective system IP 54 provided by all-round soft rubber sealing the moulding; door does not swing in or out sideways on opening; door-frame and front-frame can be exchanged.
